

Kustomize: simple application configuration for Kubernetes

Kort om undervisningen

Explore a simple application configuration tool for Kubernetes. It is a lightweight, template-free tool that often is a better alternative to overcomplicated Helm charts. Participants will explore how Kustomize simplifies the customization and management of Kubernetes resources. Through a combination of examples and hands-on exercises, attendees will gain practical skills in using Kustomize for application deployment in multiple environments efficiently.

Indhold

- kubectl and Kustomize
- Overlays and patches
- Helm vs Kustomize

Forudsætninger

It is expected that participants understand the basics of deploying applications to Kubernetes.

Målgruppe

The course is aimed at DevOps, Kubernetes administrators, and software developers involved in managing applications in Kubernetes.

Efter kurset kan deltageren

After completing the course, attendees will be able to use Kustomize to customize and manage Kubernetes resources. They will have the practical skills to deploy applications across various environments.
